### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christine H. McCarthy on 04/27/2005.

The application has been amended as follows:

In line 2 of claim 7 the recitation "bit are" is changed to "bits are".

In line 1 of claim 13 the recitation "(Original)" is changed to "(Currently Amended)".

In line 1 of claim 29 the recitation "(Previously Presented)" is changed to "(Currently Amended)".

In line 5 of claim 29 the recitation "symbol" is changed to "bit".

In line 6 of claim 29 the recitation "symbol" is changed to "bit".

In line 7 of claim 29 the recitation "symbol" is changed to "bit".

### **EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE**

Claims 1-32 are allowable over prior art.

The following is an examiner's statement of reasons for allowance: claim 1-32 are allowed because the references cited fail to teach, as applicant has, a method and an apparatus for determining a radio channel coherence time; selecting interleaving depth using the radio channel coherence time and the data transfer delay as decisive

parameters; and when the radio channel quality requirement is not fulfilled, selecting at least one transmit diversity antenna besides the main antenna so that the radio channel quality requirement will be fulfilled, as the applicant has claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Calderbank (US 6430231) and (US 6661856) discloses techniques for effective wireless communication in the presence of fading and other degradations. Garmonov (US 6510173) discloses radio transmit-receive diversity methods and devices in code division multiple access (CDMA) communication systems. Hammons (US 6678263) discloses fundamental code constructions for quasi-static and time-varying channels to provide full spatial diversity for an arbitrary number of transmit antennas. Heath (US 6298092) discloses controlling a communication parameter between transmit and receive units with multiple antennas.
